Fire!

Hands-on training prepares mariners for onboard emergencies.
WorkBoat’s 2014 construction survey showed that the number of newbuild vessels under contract, under construction or delivered over the past 12 months was down from last year. This year the number was 627 compared to 2013’s 745. It reflects a move from series-build contracts to more one-off specialized vessels. (The back end of some of the multi-vessel contracts are reflected in this survey with deliveries running into 2016.)

“We’ve had a great run the last several years in the energy sector but that sector is starting to slow down quite a bit because of all the orders that have been made there. I now see quite a bit of demand on the larger, more sophisticated vessel side than on the lower-end side,” Richard McCreary, vice president, commercial business development, BAE Systems Ships Repair, Mobile, Ala., told WorkBoat in 2014. “We’re now seeing a resurgence of equipment in what I call the traditional Jones Act trade — more the tankers, container-ships, the bulkers, the articulated tug/barge units driven, in part, by the amount of energy being taken out of the ground that has to be transported. And there are military contracts out there that are going to be awarded soon and so on.”

By Ken Hocke, Senior Editor
McCreary’s comments were made before the precipitous plunge in oil prices began late last year. So the price of oil will be a factor in the number of boat orders going forward but didn’t have a big affect on the contracts in this survey.

One of the specialized vessels McCreary mentioned that BAE is building is a subsea support vessel for deepwater and ultradeepwater work for Ocean Engineering International, Houston.

The 353’x72’ DP-2 vessel will be powered by GE Tier 4i-compliant engines. One of the boat’s major features will be a 250-ton, active-heave-compensated crane capable of reaching depths of 13,000’.

Also reflected in the survey is a number of firsts for shipyards, designers and boat owners.

Swiftships, Morgan City, La., delivered the first of three 175’x25’x13’6” DP-2, fast supply vessels to Rodi Marine. It was the first commercial vessel the boatbuilder delivered since 2008 after building military vessels exclusively for about six years. It was also the first newbuild for Rodi.

Z-drive towboats are becoming more popular. The Corps of Engineers is putting Z-drives in its new towboat under construction at Horizon Shipbuilding in Bayou La Batre, Ala., and American Commercial Lines is having eight 2,000-hp Z-drive towboats built at Steiner Construction, also located in Bayou La Batre. Four of ACL’s Z-drives are 75’x34’ canal boats and four are 70’x28’ fleet boats.

CT Marine, Portland, Maine, designed its first Z-drive towboat. The 68’x34’x10’ fleeting/switch boat Cairo was the first Z-drive towboat for Gonzales, La.-based Carline Companies.

Great Lakes Dredge & Dock, Oak Brook, Ill., awarded a contract to Eastern Shipbuilding Group, Panama City, Fla., to finish work on an ATB dredge to be made up of a 158’x52’x33’ tug and a 433’x92’x36’ dredge barge. The contract was originally awarded to Signal International in 2012 with delivery set for 2014.

And in a move that ultimately surprised no one when it was announced, Edison Chouest Offshore acquired Bollinger Shipyards. Ben Bordelon, the new chief executive officer of the company, and ECO acquired all assets and stock of Bollinger. Other details of the purchase were not disclosed and Bollinger and ECO would not comment further.
